

GO 5G FAST NOW

Best Practices and Tools for **LIGHTNING 5G** Edge Performance and **BULLETPROOF** Security

You are invited to a 5G Edge virtual roadshow to help you and your customers get **LIGHTNING-FAST** performance and **BULLETPROOF** security to enable you to work from anywhere.

WHY?

With Covid, almost everyone is working or learning from home –at least trying. Dad discusses confidential acquisition on an insecure video conference, Dr. Mom is diagnosing a patient with remote telemedicine (*HIPAA compliant?*), and 16-year-old Janet is taking a high school math test...until it happens... again.

Mom can't download her patient's MRI data, Janet's screen goes black, and Dad notices an un-invited user on his video call which disrupts the entire meeting. Covid strikes again!

But it doesn't have to be this way.

WHAT?

A virtual roadshow event to speed up access, lock up security—and ensure everyone is happy (even Mom) —using the latest 5G Edge systems.

It is presented by the best speakers we could find from Dell, VMWare, AlefEdge, Intel, and Apple — and they will explain how to leverage 5G Edge--to get everyone connected FAST and SECURE.

WHO?

If you are seeing this—you can benefit. It is for groups of all sizes that need 5G Edge.

WHEN?

The partner event is January XX, Day at 11 am, with a repeat on January XX, Day at 1 pm.

THE AGENDA

GET

How to outfit your Enterprise for 5G Edge, identifying key requirements, what to look for and customize the hardware — get over 900 megabits per second download speed (20x faster than 4G).

BUILD

How to build an end-to-end 5G Edge virtualized platform while being 2x more efficient, reduce VNF costs by 50% and reduce deployment time by 40%.

PROGRAM

How to create your own private and secure 5G Edge network at your own home with 62% higher data throughput, 48% increase in network efficiency and 100% zero trust security.

OPTIMIZE

How to work securely, achieve high performance, optimize your network when home or on the move, and get sub 1ms latency with 99.999% reliability.

CONNECT TO

Leverage Apple's iPhone 12 connect via 5G--get 50% faster computing, with an 80% faster engine and 70% faster accelerators.

Secure Performance

You will learn to leverage 5G Edge now — to solve the security and performance issues that plague all of us when working remotely... if we connect the pieces.
